KISHLAY CHANDAN

DevOps Engineer

kishlaychandan01@gmail.com — +91-8088189866 — Bengaluru, India — kishlaychandan.kclab.tech — github.com/kishlaychandan — linkedin.com/in/kishlay-chandan

DevOps Engineer with 1.8+ years building scalable cloud-native infrastructure, Kubernetes platforms, GitOps workflows, and secure CI/CD across AWS, Azure, and GCP. Track record in zero-downtime migrations, DevSecOps automation, and observability. AWS Certified Cloud Practitioner. Open to relocation.

Technical Skills

- **Container & Orchestration:** Docker, Docker Compose, Podman, Kubernetes (K8s), Helm, AWS EKS, Azure AKS, Karpenter.
- **CI/CD & GitOps:** GitHub Actions, GitLab CI/CD, Gitea Actions, ArgoCD, SonarQube, Atlantis.
- **Cloud Platforms:** AWS (EC2, EKS, Lambda, EventBridge, SageMaker), Azure (AKS, Functions, Blob Storage, OpenAI), GCP (Pub/Sub, GCS).
- **Infrastructure as Code (IaC):** Terraform, Ansible, Helm Charts, Bash, YAML.
- **DevSecOps:** Trivy, SonarQube SAST, Infisical, VAPT, CrowdSec, distroless containers, secret management.
- **Observability:** Prometheus, Grafana, Loki, Alertmanager, Uptime Kuma, OpenCost (FinOps).
- **Data & Databases:** Apache Kafka, Debezium/Airbyte (CDC), Snowflake, ClickHouse, PostgreSQL, CloudNativePG, MySQL, MongoDB, pgBackRest/Barman (PITR).
- **Languages & Frameworks:** Python, Java, JavaScript (ES6+), Node.js, Express.js, React.js, Bash.
- **AI & Agentic Tools:** OpenAI Codex, Goose, Claude, Gemini, Azure AI Foundry, Azure OpenAI Gateway, MCP Servers, GitHub Copilot, Cursor AI.
- **Certifications:** CKAD, CKA, AWS Certified Cloud Practitioner, HashiCorp Certified: Terraform Associate (Udemy).

Work Experience

DevOps Engineer — *Feb 2025 – Present*

iCapo Tech Pvt Ltd (Living Things) — AI + IoT Energy Intelligence Platform, SINE IIT Bombay — On-site, Mumbai

- **K8s Platform:**
  Built and maintained production Kubernetes platforms (AKS, EKS) running 150+ Deployments, 20+ StatefulSets, and 240+ Services across 30 namespaces and Dev/UAT/Prod environments.
- **CI/CD & GitOps:**
  Designed end-to-end CI/CD pipelines (GitHub Actions, GitLab CI/CD, Gitea Actions) — reduced deployment effort by 30% and release cycle time by 20–30%; GitOps via ArgoCD cut failed-deployment recovery time by approximately 70%.
- **Cloud Migration (AWS/GCP to Azure):**
  Migrated full production stack (frontend, backend, databases, storage, internal services) with zero downtime and zero data loss.
- **DevSecOps Gates:**
  Enforced security gates with Trivy, SonarQube, and VAPT — blocked 100% of critical CVEs across all releases; self-hosted Infisical eliminated 100% of hardcoded credentials cluster-wide.
- **Observability & DR:**
  Deployed observability stack (Prometheus, Grafana, Loki, Alertmanager) with 15+ dashboards and 50+ alerts — reduced MTTR by approximately 50%; validated DR readiness via planning, dry-runs, and failure simulation.
- **On-Premise Deployments:**
  Delivered air-gapped production stacks for 2 enterprise clients using Podman and Ansible-automated installs — 0 critical CVEs approved for production; delivered client-handover runbooks and architecture diagrams.
- **FinOps & Cost Optimization:**
  Set up OpenCost for per-namespace/team cost attribution and built a Node.js/Express service with REST APIs over Azure Cost Management billing exports, with Grafana dashboards for daily cost trend, monthly and service-wise forecast, cost by service and sub-category, and a Category Estimate panel (AI, nodes, VM, disk, blob, networking, other). Right-sized node pools by comparing actual CPU/memory usage with instance types, moving DB nodes from 8 vCPU/32GB to 4 vCPU/32GB (13 nodes to 5) and cutting node compute from $2,654 to $900/month; right-sized pods with Goldilocks, added Karpenter for batch nodes, and automated off-hours suspension of dev VMs and nodes. Ran ML models as batch jobs that suspend after completion and moved document and bill processing to event-driven batch jobs. Replaced per-service load balancers with a single FRP entry point and removed a duplicate ingress proxy, cutting networking cost from $474 to $336/month. Audited node disks and PVCs against Azure pricing, right-sized node OS disks from 128GB to 32GB, flagged 12 unattached disks and orphaned snapshots and public IPs for removal, and applied a backup lifecycle policy cutting one backup set from 7,392GB to 811GB.
- **AI Platform & Agentic Integration:**
  Self-hosted Azure OpenAI gateway on Kubernetes with per-team token budgets and governance for 10+ engineers; integrated Codex, Goose, Claude, Gemini, Azure AI Foundry for agentic and LLM-powered application features.

Full Stack Developer Trainee — *Nov 2023 – Jan 2025*

Geekster — Remote

- **Full-Stack Development:**
  Shipped 4 full-stack applications (E-commerce, Food Delivery, Expense Tracker, Chai Sutta Bar) using React, Node.js, Express.js, and MongoDB; containerized all 4 with Docker Compose, reducing environment setup time from hours to under 5 minutes.

Software Development Intern — *Mar 2023 – Jul 2023*

Digisnare Technologies — On-site, Gulbarga, Karnataka

- **Portal Development & API Optimization:**
  Launched KKDIAL portal handling 500+ monthly queries (eliminating 60% of manual lookup effort); optimized MySQL-backed REST APIs — reduced latency by 40% and post-release defects by 25% via 20+ unit tests.

Education, Certifications & Achievements

- **MCA (2021–2023)** — Central University of Karnataka — CGPA: 8.3/10
- **BCA (2018–2021)** — AIMS Institute of Higher Education, Bengaluru — CGPA: 8.3/10
- **AWS Certified Cloud Practitioner** (Oct 2026).
- **UGC NET** qualified (June 2024); **1st Place**, Geekathon (50+ participants); **5-Star Gold** Java (HackerRank).
