

KISHLAY CHANDAN

DevOps Engineer — Platform Engineer — Cloud Infrastructure — DevSecOps

kishlaychandan01@gmail.com — +91-8088189866 — Bengaluru, India — kishlaychandan.kclab.tech —
github.com/kishlaychandan — linkedin.com/in/kishlay-chandan

DevOps & Platform Engineer with 1.5+ years of experience building scalable cloud-native infrastructure, Kubernetes platforms, GitOps workflows, and secure CI/CD systems. Experienced in AWS, Azure, GCP, Kubernetes, Docker, ArgoCD, GitHub Actions, DevSecOps, observability, and production-grade platform automation across cloud and on-premise environments.

Technical Skills

- Container & Orchestration: Docker, Docker Compose, Podman, Kubernetes (K8s), Helm, AWS EKS, Azure AKS, ArgoCD
- CI/CD & GitOps: GitHub Actions, GitLab CI/CD, Gitea Actions, ArgoCD, SonarQube
- Cloud Platforms: AWS (EC2, EKS, Lambda, EventBridge, SageMaker), Azure (AKS, Functions, Blob Storage, Event Grid, OpenAI), GCP (Pub/Sub, Cloud Scheduler, GCS)
- Infrastructure as Code: Terraform, Ansible, Helm Charts, Bash Scripting, YAML
- DevSecOps & Security: Trivy, SonarQube SAST, Infisical, VAPT, image hardening, distroless containers, secret management
- Observability & Monitoring: Prometheus, Grafana, Loki, Alertmanager, Uptime Kuma, Blackbox Exporter, Beszel, Dozzle
- Data & Streaming: Apache Kafka, Debezium (CDC), MQTT, Snowflake, Kafka Schema Registry
- Databases & Storage: PostgreSQL, MySQL, MongoDB, MinIO, pgBackRest (PITR, full/incremental/differential backups)
- AI & Productivity: GitHub Copilot, Cursor AI, Claude AI, Azure OpenAI Gateway, MCP Servers
- Languages: Bash, YAML, Python, Java, JavaScript (ES6+), Node.js, Express.js, React.js

Work Experience

DevOps Engineer

Feb 2025 – Present

iCapo Tech Pvt Ltd (Living Things) — On-site, IIT Bombay, Mumbai

- Built and maintained production Kubernetes platforms (AKS, EKS) running 150+ Deployments, 20+ StatefulSets, 29 CronJobs, and 240+ Services across 30 namespaces spanning Dev/UAT/Prod environments.
- Designed end-to-end CI/CD pipelines using GitHub Actions, GitLab CI/CD, and Gitea Actions — reduced deployment effort by 30% and cut release cycle time by 20–30%.
- Implemented GitOps using ArgoCD across all environments; automated rollbacks reduced failed-deployment recovery time by ~70% compared to manual intervention.
- Containerized 10+ services using Docker, Docker Compose, and Podman; multi-stage builds reduced average image size by ~40%.
- Enforced DevSecOps gates with Trivy, SonarQube, and Infisical — blocked 100% of critical CVEs and eliminated hardcoded credentials across all pipelines.
- Deployed observability stack (Prometheus, Grafana, Loki, Alertmanager, Uptime Kuma) with 15+ dashboards and 50+ alerts — reduced MTTR by ~50% through proactive detection.
- Led zero-downtime migration of full production stack from AWS/GCP to Azure (AKS, Functions, Blob Storage, Event Grid) — 0 minutes of downtime, 0 data loss.
- Managed Kubernetes resources including Deployments, StatefulSets, Ingress, HPA, CronJobs, and Secrets across 30 namespaces in production clusters.
- Self-hosted Azure OpenAI gateway on Kubernetes; enforced per-user token budgets and spend caps for 10+ engineers, cutting untracked AI spend to zero.
- Drove FinOps via Looker Studio dashboards; idle VM suspension and right-sizing reduced cloud costs by ~20%.

Full Stack Developer Trainee

Nov 2023 – Jan 2025

Geekster — Remote

- Shipped 4 full-stack applications (E-commerce, Food Delivery, Expense Tracker, Chai Sutta Bar) using React, Node.js, Express.js, and MongoDB.
- Containerized all 4 applications with Docker and Docker Compose, reducing environment setup time from hours to <5 minutes.
- Achieved 1st place in both solo and team categories at Geekathon hackathon out of 50+ participants.

Software Development Intern

Mar 2023 – Jul 2023

Digisnare Technologies — On-site, Gulbarga, Karnataka

- Launched KKDIAL portal handling 500+ monthly queries, eliminating 60% of manual lookup effort for internal teams.

- Optimized MySQL-backed REST APIs — reduced average response latency by 40% and post-release defects by 25% via 20+ unit tests.

Projects

E-commerce Application — *Self Project*

[\[GitHub\]](#) — [\[Live Demo\]](#)

- Full-stack e-commerce platform serving 200+ daily users with Admin Portal, cart, wishlist, order tracking, and Razorpay payments across 10+ dynamic pages.
- Deployed on Hostinger VPS with Docker Compose, private networking, TLS termination, and Nginx Proxy Manager — 100% self-managed infra from DNS to running containers.
- Provisioned k8s local Kubernetes cluster; authored 5+ manifest types (Deployments, Services, ConfigMaps, Secrets, Ingress) for production-ready orchestration testing.
- Optimized frontend with debouncing, throttling, and lazy loading — reduced page load time by 45%.
- Stack: React.js, Node.js, Express.js, MongoDB, Tailwind CSS, Razorpay — Docker, Docker Compose, k8s, Nginx Proxy Manager, Hostinger VPS

The following projects were delivered at iCapo Tech Pvt Ltd — proprietary and not publicly hosted.

Infrastructure Migrations

- Cloud (AWS/GCP → Azure): Migrated full production stack to AKS, Azure Functions, Event Grid, and Blob Storage — 0 minutes downtime, 0 data loss.
- GitLab → Gitea on K8s: Migrated all repositories and rebuilt all CI/CD workflows in Gitea Actions; self-hosted on Kubernetes with full org/branch governance.
- IoT Infra (AWS EKS → AKS): Migrated MQTT brokers and device connectivity for 34 device protocols to Azure with 0 device downtime.
- Secrets (Hardcoded → Infisical): Eliminated 100% of hardcoded credentials across all pipelines and environments; centralized rotation for all services.

On-Premise Enterprise Deployments

- Delivered air-gapped production stacks for 2 enterprise clients (global IT firm + major Indian retailer) using Podman, PostgreSQL, MinIO, Nginx, Dozzle, and Beszel.
- Enforced security with Trivy, SonarQube, and VAPT — 0 critical CVEs approved for production across all releases.

Firmware CI/CD & OTA Automation

- Automated CI/CD for 34 IoT device protocols (17 GSM + 17 Wi-Fi) via Gitea Actions + Azure Blob OTA — cut release time from 2+ hours to ~40 minutes (67% faster).

Real-Time IoT Data Pipelines

- Built MQTT → Kafka → Snowflake streaming pipeline handling real-time telemetry across 34+ device types.
- Implemented PostgreSQL → Debezium → Kafka → Snowflake CDC pipeline with Avro Schema Registry — 0 schema violations in downstream warehouse.

PostgreSQL Disaster Recovery

- Configured pgBackRest with full, incremental, and differential backups + PITR — recovery point objective (RPO) reduced to <1 minute for critical production databases.

Education

- MCA (2021–2023) — Central University of Karnataka CGPA: 8.3/10
- BCA (2018–2021) — AIMS Institute of Higher Education, Bengaluru CGPA: 8.3/10

Achievements & Certifications

- Qualified UGC NET (June 2024) — Lectureship & JRF eligibility in Computer Science & Applications.
- 1st Place (solo and team) — Geekathon Hackathon, Geekster (50+ participants).
- 5-Star Gold Badge in Java — HackerRank.
- Certified in Full Stack Web Development — Geekster.
- Preparation completed for AWS Cloud Practitioner (CLF-C02), CKAD, and Terraform Associate — certifications in progress.
