

# KISHLAY CHANDAN

DevOps Engineer — Platform Engineer — Cloud Infrastructure — DevSecOps

kishlaychandan01@gmail.com — +91-8088189866 — Bengaluru, India — kishlaychandan.kclab.tech —  
github.com/kishlaychandan — linkedin.com/in/kishlay-chandan

DevOps & Platform Engineer with 1.5+ years building scalable cloud-native infrastructure, Kubernetes platforms, GitOps workflows, and secure CI/CD across AWS, Azure, and GCP. Track record in zero-downtime migrations, DevSecOps automation, observability, and on-premise deployments. Owns infrastructure end-to-end — architecture to incident response. Open to relocation.

---

## Technical Skills

---

- **Container & Orchestration:** Docker, Docker Compose, Podman, Kubernetes (K8s), Helm, AWS EKS, Azure AKS, ArgoCD, Karpenter
- **CI/CD & GitOps:** GitHub Actions, GitLab CI/CD, Gitea Actions, ArgoCD, SonarQube, Atlantis
- **Cloud Platforms:** AWS (EC2, EKS, Lambda, EventBridge, SageMaker) — Azure (AKS, Functions, Blob Storage, OpenAI) — GCP (Pub/Sub, GCS)
- **Infrastructure as Code:** Terraform, Ansible, Helm Charts, Bash Scripting, YAML, Atlantis (Terraform automation)
- **Networking & Edge:** Traefik, Nginx, Nginx Proxy Manager, Bunny.net (CDN, Pull Zones, Edge Rules), Rate Limiting, CrowdSec
- **DevSecOps & Security:** Trivy, SonarQube SAST, Infisical, VAPT, CrowdSec, distroless containers, secret management
- **Testing & Load Testing:** Locust, custom load-testing tooling, 20+ unit tests
- **Observability & Monitoring:** Prometheus, Grafana, Loki, Alertmanager, Uptime Kuma, Blackbox Exporter, Beszel, Dozzle, OpenCost (FinOps)
- **Data & Streaming:** Apache Kafka, Debezium (CDC), MQTT, Snowflake, Kafka Schema Registry
- **Databases & Storage:** PostgreSQL, CloudNativePG, MySQL, MongoDB, MinIO; pgBackRest (PITR, full/incremental/differential) — Barman/Barman Cloud, pgAudit
- **AI & Productivity:** GitHub Copilot, Cursor AI, Claude AI, Azure OpenAI Gateway, MCP Servers
- **Languages & Frameworks:** Bash, YAML, Python, Java, JavaScript (ES6+), Google Apps Script, Node.js, Express.js, React.js

---

## Work Experience

---

### DevOps Engineer

Feb 2025 – Present

iCapo Tech Pvt Ltd (Living Things) — AI + IoT Energy Intelligence Platform, SINE IIT Bombay — On-site, Mumbai

- **K8s Platform:** Built and maintained production Kubernetes platforms (AKS, EKS) running **150+ Deployments**, **20+ StatefulSets**, **29 CronJobs**, and **240+ Services** across 30 namespaces and Dev/UAT/Prod environments.
- **CI/CD & GitOps:** Designed end-to-end CI/CD pipelines (GitHub Actions, GitLab CI/CD, Gitea Actions) — reduced deployment effort by **30%** and release cycle time by **20–30%**; GitOps via ArgoCD cut failed-deployment recovery time by **~70%** vs. manual intervention.
- **Cloud Migration (AWS/GCP → Azure):** Migrated full production stack — frontend, backend, databases, storage, and internal services — with **0 minutes downtime** and **0 data loss**.
- **Ingress Migration (Nginx → Traefik):** Migrated reverse-proxy layer to Traefik with rate-limiting and **CrowdSec** middlewares for bot/abuse protection at the edge.
- **Source Control Migration (GitLab → Gitea on K8s):** Migrated all repositories — including proper repo mirroring and forks — and rebuilt all CI/CD workflows in Gitea Actions; self-hosted on Kubernetes with **self-hosted Gitea Actions runners**, full org and branch governance.
- **IoT Infrastructure Migration (AWS EKS → AKS):** Migrated MQTT brokers and device connectivity for **34** device protocols with **0 device downtime**.
- **Secrets Migration (Hardcoded → Infisical vault):** Self-hosted **Infisical** on Kubernetes and integrated it with application deployments across the cluster — eliminated **100%** of hardcoded credentials across all pipelines and environments; centralized rotation for all services.
- **Edge/CDN & IaC:** Deployed frontend apps on **Bunny.net** with storage-account pull zones and CDN edge rules provisioned fully via **Terraform**; configured **Atlantis** for PR-based, collaborative Terraform workflows.
- **Containerization:** Containerized 10+ microservices using Docker and multi-stage builds — reduced average image size by **~40%**.
- **DevSecOps Gates:** Enforced security gates with Trivy, SonarQube, and VAPT — blocked **100%** of critical CVEs across all releases.
- **Observability:** Deployed observability stack (Prometheus, Grafana, Loki, Alertmanager, Uptime Kuma) with **15+ dashboards** and **50+ alerts** — reduced MTTR by **~50%**.

- **On-Premise Deployments:** Delivered air-gapped production stacks for **2 enterprise clients** (a global IT firm and a major Indian retailer) using Podman — covering frontend, backend, databases, object storage, reverse proxy, log streaming, and server monitoring; **0 critical CVEs** approved for production; delivered client-handover runbooks and architecture diagrams.
- **Firmware CI/CD & OTA:** Automated CI/CD for **34 IoT device protocols** (17 GSM + 17 Wi-Fi) via Gitea Actions and cloud OTA — cut release time from **2+ hours to ~40 minutes** (67% reduction).
- **IoT Data Pipelines:** Built MQTT → Kafka → Snowflake streaming pipeline for real-time telemetry across **34+ device types**; implemented PostgreSQL → Debezium → Kafka → Snowflake CDC pipeline with Avro Schema Registry — **0 schema violations**; set up **Snowflake** (warehouse) and **ClickHouse** (analytics) for sub-second queries and self-serve analytics.
- **DR & Postgres Platform:** Set up **pgBackRest** (full/incremental/differential + PITR, RPO <1 min) and **Datasaurus** for centralized backup management with unified restore workflows; separately deployed **CloudNativePG** for another team with pooler setup and initial-restore bootstrap, using **Barman Cloud** for backups/PITR, **pgAudit**, and Grafana for cluster/PVC monitoring and alerting.
- **Disaster Recovery — MQTT → Kafka:** Designed raw-packet replay with persistent MQTT retention for zero-loss recovery if Kafka fails; validated via DR planning, dry-runs, and failure simulation.
- **AI Platform:** Self-hosted Azure OpenAI gateway on Kubernetes; provisioned organization-wide access with per-user/per-team token budgets and usage dashboards for **10+ engineers** — cutting untracked AI spend to zero.
- **Cost Optimization & FinOps:** Set up **Karpenter** for autoscaling cron/batch job nodes and **OpenCost** for detailed Kubernetes cluster cost reporting (per-namespace/per-team attribution); built **Looker Studio** FinOps dashboards powered by **Google Apps Script**, plus a dedicated **Azure cost dashboard** broken down by service name, resource type, and category — idle VM suspension and right-sizing reduced cloud costs by **~20%**.
- **Independent Ownership:** Independently owned **3 full-stack, high-priority projects end-to-end under tight deadlines** — planning, design, proposal, development, deployment, and load testing (Locust and a self-built load-testing tool) — with results documented in delivery reports for stakeholders.

## Full Stack Developer Trainee

Nov 2023 – Jan 2025

Geekster — Remote

- **Full-Stack Development:** Shipped 4 full-stack applications (E-commerce, Food Delivery, Expense Tracker, Chai Sutta Bar) using React, Node.js, Express.js, and MongoDB.
- **Containerization:** Containerized all 4 applications with Docker and Docker Compose, reducing environment setup time from hours to **<5 minutes**.
- **Hackathon:** Secured **1st place** (solo and team) at Geekathon hackathon out of 50+ participants.

## Software Development Intern

Mar 2023 – Jul 2023

Digisnare Technologies — On-site, Gulbarga, Karnataka

- **Portal Development:** Launched KKDIAL portal handling **500+ monthly queries**, eliminating **60%** of manual lookup effort.
- **API Optimization:** Optimized MySQL-backed REST APIs — reduced latency by **40%** and post-release defects by **25%** via 20+ unit tests.

---

## Personal Projects

### E-commerce Application — *Personal Project*

[\[GitHub\]](#) — [\[Live Demo\]](#)

- Full-stack e-commerce platform serving **200+ daily users** with Admin Portal, cart, wishlist, order tracking, and Razorpay payments; optimized frontend (debouncing, throttling, lazy loading) — reduced load time by **45%**.
- Deployed on Hostinger VPS with Docker Compose, private networking, TLS termination, and Nginx Proxy Manager — fully self-managed infrastructure from DNS to running containers.
- **Stack:** React.js, Node.js, Express.js, MongoDB, Tailwind CSS, Razorpay, Docker Compose, Nginx Proxy Manager, Hostinger VPS

---

## Education

- **MCA (2021–2023)** — Central University of Karnataka CGPA: 8.3/10
- **BCA (2018–2021)** — AIMS Institute of Higher Education, Bengaluru CGPA: 8.3/10

---

## Achievements & Certifications

- Qualified **UGC NET** (June 2024) — CS & Applications; **1st Place** (solo & team) — Geekathon, Geekster (50+ participants).
- **5-Star Gold Java** (HackerRank); **Full Stack Web Development** cert. (Geekster); preparing **AWS CLF-C02**, **CKAD**, **Terraform Associate**.
